My appreciation to the DOE team as well. I fully understand the complexities of the decision process that you have to go through. Not just on welding heads, but on every major design/ build transition that we experience every day. When it goes from paper to concrete and steel, I am glad that you are there to ensure the proper balance between EPC risk and programmatic risk. Thank you.
Frank

Subject: Hold of vessel heads

To all BNI/ORP/DOE-WTP staffs

Please give a big thank all our combined staff who have worked diligently to produce and evaluate the technical products support this project decision.

The release of the hold on welding the Non-Newtonian vessel heads has been issued and will be transmitted shortly. Christy Bender can provide copies if needed. The issued letters are consistent with the draft that were provided for information yesterday.

The specific letters numbers are:

11-NSD-056
11-WTP-274
